

Sentry for Global Mining Operations

1. Real-Time Threat Detection Across the Open Web

Sentry continuously aggregates and analyzes data from:

- Search engines
- News sources
- Social platforms (including Reddit)
- Custom web crawls
- Live feeds

This enables early detection of:

- Cyber threats
 - Fraud activity
 - Violence risks
 - Extremism signals
 - Emerging reputational threats
-

2. AI-Driven Intelligence, Not Just Data

Sentry transforms fragmented online information into:

- Cohesive entity profiles
- Relationship mapping
- Contextual insights
- Dynamic risk scoring

Instead of raw data overload, teams get prioritized, actionable intelligence.

3. Executive-Level Visibility

Dynamic dashboards provide:

- Clear threat prioritization
- Real-time updates
- Risk trend monitoring

Leadership gets clarity without needing to sift through noise.

4. Built for Security Team Collaboration

Designed for enterprise environments:

- Shared intelligence dossiers
 - Role-based access controls
 - Multi-channel alerts (email, SMS, push notifications)
 - Enables faster internal coordination and incident response.
-

5. Continuous Monitoring

Threat landscapes evolve quickly.

Sentry provides ongoing digital monitoring so organizations:

- Stay ahead of coordinated campaigns
 - Detect escalation patterns early
 - Respond before damage occurs
-

6. Enterprise-Grade Security & Compliance

Built with:

- Encryption
- Multi-factor authentication

- Audit logging
- Alignment toward SOC 2 standards
- Progression toward zero-trust architecture

Supports modern governance and compliance requirements.

7. Scalable SaaS Model

- Cloud-based, scalable architecture
- Flexible subscription tiers
- Integrated billing via Stripe
- Easy to deploy, easy to scale.

Sales Pitch

Today's threats don't start inside your organization — they start online. Whether it's cyber risk, fraud, coordinated harassment, violence indicators, or reputational attacks, the early warning signs are almost always visible in the open web. The problem is, most organizations don't have the tools to see them in time.

Confidion Sentry is an enterprise-grade OSINT and web intelligence platform that continuously monitors the digital landscape in real time. It aggregates data from search engines, global news, social platforms like Reddit, and custom web crawls — then applies AI-driven analysis to turn fragmented signals into actionable intelligence.

Sentry builds deep entity profiles, maps relationships, scores risk, and delivers prioritized alerts through a single, unified dashboard. Instead of reacting to incidents, your team can anticipate and mitigate threats before they escalate.

With enterprise security controls and scalable SaaS deployment, Confidion Sentry empowers organizations to move from reactive crisis management to proactive threat intelligence — with speed, clarity, and confidence.”

“For Canadian mining juniors operating in emerging and high-risk jurisdictions, digital risk is operational risk. Community unrest, activist campaigns, misinformation, organized crime, and even insider threats often surface online before they impact your site, your people, or your share price.

Confidion Sentry is an enterprise-grade OSINT and web intelligence platform designed to give you early warning. It continuously monitors global news, social platforms like Reddit, search engines, and live web sources — using AI to detect signals tied to fraud, extremism, violence risk, coordinated activism, and reputational threats.

Instead of scrambling after an incident, Sentry builds deep entity profiles, maps relationships, and scores risk — delivering prioritized, real-time alerts through a single dashboard your leadership team can act on immediately.

For mining juniors with limited internal security resources, this means scalable, affordable threat intelligence that protects your people, your assets, your community relationships, and ultimately your license to operate.”

Sales pitch with a focus on investor confidence

“For Canadian mining juniors operating in high-risk jurisdictions, investor confidence can shift overnight. A community conflict, corruption allegation, activist campaign, or security incident can quickly escalate online — long before it shows up in a board report or news headline. And when it does, the market reacts immediately.

Confidion Sentry gives you early warning. It continuously monitors global news, search engines, and social platforms like Reddit, using AI to detect emerging threats tied to activism, fraud, violence risk, misinformation, and reputational exposure.

Instead of reacting after your share price takes a hit, Sentry delivers prioritized, real-time intelligence through a single dashboard — helping leadership assess risk quickly and respond with clarity.

For TSX-listed mining juniors, this isn’t just about security — it’s about protecting disclosure integrity, strengthening ESG oversight, and demonstrating proactive risk management to investors.

In volatile markets, early intelligence isn’t a luxury — it’s a safeguard for shareholder value.”
